

QUALITY POLICY

Acciaieria Arvedi produces hot and cold rolled steel coils and strip, for the most demanding applications, with unique size, flatness and surface quality tolerances and mechanical properties. The Company's strategic goal is to be the market leader in its sector, bringing alongside the spirit of innovation which has always been its characteristic a clear commitment to environmental sustainability, an increasingly key factor for competitiveness.

Its Management, applying UNI EN ISO 9001 and IATF 16949 regulations as its quality management system, places customer satisfaction and environmental sustainability at the heart of company operations, mandating all company functions to provide products which respect customer requirements, manufactured with a production cycle that respects an "end of waste" environment. Its Management, continuously and systematically, also promotes constant improvements aimed at expanding the product range and quality and speed and flexibility of service through:

- the organisation of each operational function, with priority attention to the prevention of non-conformances with respect to their correction (risk-based thinking);
- the definition of company quality targets through measurable indicators, their periodical re-examination and making resources available to achieve them;
- constant verification and maintaining of the progress achieved;
- the adoption of quality improvement programmes;
- training and motivation of all personnel;
- the dissemination and understanding of the principles expressed herein.

All this scrupulously respecting the environment and current environmental regulations and safety regulations for the workplace and for keeping the workplace clean and tidy as appropriate to the product and to the requirement of the workforce.

The Managing Director
Mario Caldonazzo
