COMPANY POLICY

Arvedi Tubi Acciaio S.p.A.

VISION

Determination, **creativity** and **skill** allow man to achieve **high levels of progress**. Man needs **instruments** to translate his **intellectual intuitions** into works. With **determination**, **creativity** and **skill**, ATA manufactures its products based on an on-going process of **technological development**, the lifeblood of **progress**.

(according to: ISO 9001:2015; IATF 16949:2016; API Q1 10°ed.; ISO 14001:2015; ISO 45000:2018; ISO 50001:2018)

MISSION

We guarantee our customers that specific needs are met through the environmentally sustainable production of quality steel tubes and pipes, respecting applicable requirements, man and the environment, bringing together skills, passion and a spirit of innovation.

THE STRUCTURE OF AN EFFICIENT SYSTEM

- Major **investments in innovation** to produce carbon steel tube and pipe **meeting the increasing demands of our customers**, to significantly reduce the number of workplace injuries and to constantly improve environmental and energy performances.
- **Advanced technologies** and production **plants** and surveillance and control systems able to lower energy consumption, risks for the environment and operators, favouring the prevention of defects, accidents, possible effects on health and the environment, **with a view to continuous improvement and sustainable management of resources.**
- **Search for and adoption of innovative, technological and management solutions**, aimed at safeguarding health and safety, at hazards elimination and for the reduction of risks for workers, and improving product/process performances, protecting the environment (including usage of renewable energy) and reducing pollution and energy consumption, involving plants machinery and work equipment, supporting and encouraging third-party initiatives right from the design phase.
- **Integration** with Acciaieria Arvedi to ensure **immediate procurements** and the development of **customised steel grades** meeting customer expectations.
- **Work teams** composed of **highly competent people** who share a **culture of excellence**, in order to offer **intelligent solutions** and **complete support** throughout the project, from the definition of specifications to after-sales assistance.
- **Communication, consultation** and **involvement** of its own employees, their representatives and those from external companies who work within the Organisation, spreading **greater awareness** of the importance of its role in the manufacturing of products that meet customer requirements, the management of production processes, the use of energy and at the same time the improvement of environmental and work conditions, **through appropriate communication channels**, with particular reference to areas of significant risk, impact on the environment and energy consumption.
- **Constant improvement in the skills and responsibility** of the Management, Persons in Charge and all workers, through specific information and personnel training programmes.
- Full and substantial **compliance with the applicable legislative requirements** and contractual obligations to customers and suppliers.
- **Purchase of energy-sufficient and sustainable products and services** aimed at improving energy and environmental performances.
- **Resources needed and informations** to achieve the objectives and targets defined to guarantee **continuous improvement in performances** as regards quality, the environment, safety, energy and company management systems.
